

Language change at the phonology- morphology interface

Prof. Dieter GUNKEL
(University of Richmond)

This mini-course is designed to provide students with some hands-on experience analyzing data that reflect interesting interactions between phonology and morphology as well as language change that affects morphophonology. We will begin by reviewing some of the basic types of interactions between phonology and morphology in word formation. After that, we will analyze a number of data sets that reflect interesting morphophonological processes as well as diachronic morphophonological change.

Students (in particular those of LM39 in Linguistics and Doctoral Program in Linguistics) are warmly welcomed, as well as all interested students and colleagues.
